

SHARNA HOSSAIN

Software Engineer

917-392-2819 | sharnajh@gmail.com | www.sharna.dev | Brooklyn, New York

PROFESSIONAL SUMMARY

Software engineer building and operating backend systems end-to-end. Experienced in designing distributed services, APIs, and data workflows from complex requirements through production. Strong focus on scalability, reliability, and fast iteration, with a foundation in Java-based backend development, event-driven systems, cross-functional collaboration, and leveraging AI tools to accelerate development.

WORK EXPERIENCE

Software Engineer II

Morgan Stanley | August 2024 - Present | New York, NY

- Delivered a real-time payments system end-to-end, later abstracted into a reusable, extensible library adopted across multiple systems, enabling reliable settlement of high-value transactions and contributing to a broader initiative projected to avoid \$70M in costs
- Designed and implemented distributed backend architecture, defining service boundaries and integration patterns to support scalable cross-system services
- Built event-driven services enabling reliable communication between systems, improving resilience and operational reliability
- Partnered with product and engineering stakeholders during grooming, solution reviews, and signoff discussions, refining requirements and shaping implementation decisions
- Supported rollout of a new real-time processing model, ensuring accurate execution of high-volume workflows at scale
- Modernized a legacy platform into a distributed web architecture, decoupling front-end and back-end systems to improve scalability, performance, and maintainability

Pro Bono Developer

Global Poverty Research Lab | March 2026 - Present | Remote

- Contributing to an open-source data platform by implementing authentication and role-based access controls
- Supporting early interactive analytics in an R/Python stack, improving secure and scalable data access for research users
- Part of Morgan Stanley's Tech Change Makers program

Software Engineer I

Morgan Stanley | February 2024 - August 2024 | New York, NY

- Built a microservice supporting real-time workflows, enabling integration between internal systems and external partners
- Implemented messaging flows and tracking logic to ensure accuracy and traceability across backend systems
- Produced architectural decision records (ADRs) and C4 diagrams to guide service design and align cross-functional teams
- Diagnosed and resolved data integrity issues, improving reliability across distributed services

EDUCATION

Coursework in Computer Science | Columbia University | 2022

Associate in Science, Computer Science | Borough of Manhattan Community College | 2021

Coding Bootcamp Certificate | New York Code + Design Academy | 2018

SKILLS & TECHNOLOGIES

Languages: Java, SQL, Python, JavaScript, R

Systems: Distributed Systems, Event-Driven Architecture, Real-Time Payments

Frameworks: Spring Boot, Angular, React

Tools: Kafka, IBM MQ, Docker, Jenkins, Snowflake, Gradle, Linux, Git
